

WHAT IS CLAIMED IS:

1 1. A food kit for components of a chilled or frozen dessert, said food kit
2 having a plurality of compartments including a first compartment for a primary dessert
3 component, a second compartment for a secondary dessert component such as a cookie or
4 wafer, and a third compartment for a topping component such as fudge, syrup, or bits of
5 candy wherein the user may manually assemble and combine the components of the dessert
6 as desired.

1 2. A food kit for components of a chilled or frozen dessert, said food kit
2 having a plurality of compartments wherein at least one of the compartments has a curved
3 shape for holding a scoopable component of the dessert such as ice cream or yogurt, said
4 food kit further including a second compartment for holding a component of the dessert such
5 as a cookie or wafer, wherein the cookie or wafer has a curved shape and the curved shape of
6 the compartment for the ice cream or yogurt substantially matches the curved shape of the
7 cookie or wafer, and wherein the cookie or wafer may be used to scoop out the ice cream or
8 yogurt from the compartment therefor.

1 3. The food kit of claim 2 wherein the curved shape of the compartment
2 for the ice cream or yogurt includes a first substantially spherical section.

1 4. The food kit of claim 3 further including at least a second spherical
2 section in said compartment for the ice cream or yogurt, said first and second spherical
3 sections facing in two different directions wherein the cookie or wafer may be used by the
4 consumer to scoop the ice cream or yogurt in at least two, different directions.

1 5. The food kit of claim 4 wherein said two directions are substantially
2 perpendicular to each other.

1 6. The food kit of claim 3 further including at least a second substantially
2 spherical section in said compartment for the ice cream or yogurt, said second spherical
3 section substantially facing said first spherical section in an opposing manner.

1 7. The food kit of claim 2 wherein the second compartment has a
2 substantially cylindrical portion and two opposing ear portions extending outwardly beyond
3 the cylindrical portion, said second compartment holding a plurality of cookies or wafers

4 stacked in the cylindrical portion thereof, said ear portions having surfaces sloping
5 downwardly and inwardly to provide opposing spaces to permit the consumer to put his or
6 her fingers on each side of a cookie in the stack to grip and remove the cookie.

1 8. The food kit of claim 7 further including a spoon positioned atop the
2 stack of cookies in the second compartment wherein the opposing ends of the spoon are
3 respectively received in the opposing ear portions of the second compartment.
